

ABSTRACT OF THE INVENTION

A faucet with a connecting structure with a cold and a hot water pipe includes an inlet base formed in a lower portion. The inlet base has a lateral hole, a cold
5 and a hot water passageway for receiving a cold and a hot water pipe therein and communicating with the lateral hole. A bolt extends pivotally in the lateral hole, having two convex faces to face or leave the water passageways to let two, cold and hot, water pipes to fit in the water
10 passageways and then deadlocked or released by the bolt by means of the outer walls of the two convex faces of the bolt if the bolt is rotated forward or backward for a certain preset angle.
